
Due Date:	By 11:59 PM, May 28 th , 2026
Late Submission:	None accepted.
Purpose:	The purpose of this assignment is to practice server-side coding to handle http requests and responses.

You are required to implement a simplified online course enrollment system using: 1) Java Servlets and 2) JSP. That means, you implement the same website twice, one time using servlets and one time with JSP.

The functions/pages of this website are described below.

Important Notes:

- All course information is hard-coded.
- No database or files are allowed.
- Use sessions to store the student's selected enrollments.
- Style all pages using CSS.

1. Course Listing Page

This is the **main page** that displays a list of available courses. Each course must display:

- Course title
- Course code
- Instructor name
- Number of available seats
- Course credit hours (1 – 4)
- Short course description
- A dropdown list to select section type: Morning, Afternoon, Evening
- “Enroll” button

At the **top-right corner** of the page, provide a link named “My Enrollment”. Clicking this link **takes the user to the Enrollment Summary Page**.

When the user clicks the Enroll button:

- The selected course is added to the enrollment list
- The selected section and credit hours are stored
- The user remains on the Course Listing Page

2. Enrollment Summary Page

This page displays all courses the student is enrolled in. Each row must display:

- Course title
- Course code
- Selected section
- Credit hours
- Cost per credit hour
- Total cost for that course

You need to have the following actions:

- An Update Button that allows the user to modify the number of credit hours.
 - Recalculate the total cost after updating.
 - If the entered credit hours are 0:
 - Show a warning message
 - Do NOT remove the course automatically
- A Remove Button that completely removes the selected course from the enrollment list.
- A Continue Browsing Link that returns the user to the Course Listing Page.
- A Confirm Enrollment Button that redirects the user to a confirmation page containing a success message.

3. Enrollment Confirmation Page

On enrollment confirmation, you can show “Enrollment Confirmed Successfully!” followed by the following information:

- Total number of enrolled courses
- Total tuition cost
- A thank-you message

Detailed Requirements

- Do not mix Servlets and JSP in the same implementation.
- One version must use Servlets only.
- Another version must use JSP only.
- Do not use databases or external files.
- Use Java Sessions to maintain the enrollment list.
- Use proper object-oriented design where applicable.
- Apply CSS styling to improve the appearance of the pages.
- Input validation is required.
- Prevent negative credit hours.
- Display proper warning/error messages.
- Your website should contain consistent navigation, clear layout, and readable formatting.
- Submit only your source code and project folders.
- Do not submit node_modules, server libraries, dependent JAR files, or compiled binaries.

Submitting Assignment #1

Submission:

- This is an individual assignment.
- Please give meaningful names to files to make the evaluation process easier.
- Do not submit the modules or the dependent jar files. **Only submit your code with proper directories.**
- Please make sure to review your final version right before submission and avoid making unreviewed last-minute changes. The submitted file will be graded, and it is your responsibility to ensure it is the correct version.
- You need to create one Zip file for your assignment. This .zip file must contain your code with proper directories. The naming convention is as follows:
 - The .zip file should be called *a#_studentID*, where # is the number of the assignment and studentID is your student ID. For example: with regard to this assignment, a student with ID/Number: 123456 shall submit a .zip file named: a1_123456.zip
 - Submit your zipped file via course Moodle webpage.

Evaluation Criteria for Assignment 1

Event Listing Page	8 pts
• Use some CSS to style the page • Display course information correctly • The “Enroll” button function • The “My Enrollment” link function	1 pts 2 pts 4 pts 1 pts
Enrollment Summary Page	11 pts
• The “Update” function • The “Remove” function • The “Continue Browsing” link • The “Confirm Enrolment” button • Use some CSS to style the page	3 pts 4 pts 2 pts 1 pt 1 pt
Enrollment Confirmation Page	1 pt
TOTAL	20 pts
